

Application area:

Finishing Pos. 3

EXTRADIAM

electroplated wheel

This tool (wheel) executes the **finishing** phase, on all kind of material. This phase plays **a vital role in the slab's working process** to obtain **an excellent final result**.

It is the bridge between the grinding phase and the polishing one.

To realize this tool, we use a **steel core with high tolerance**, upon which we lay the extra-fine **abrasive diamond powder through an electroplating process at high density**.

The result is an extreme stiffness and an excellent finishing of the profile, preparing it for the following polishing phase.

The main characteristics are:

- ▶ **Finishing of the geometry** of the profile
- ▶ **Perfect finishing** of the profile
- ▶ **Optimization to the polishing phase**
