OMASINT

sintered wheels

This kind of tool (wheel) executes the granite **grinding**, preparing the slab to the following **smoothing phase**, thanks to its **high performances** in terms of **cutting speed** and **removal capacity** supplied by the patented interchangeable sectors. We would like to underline **three main characteristics** that make this tool a best-seller:

- ▶ The production **costs are reduced** thanks to single sectors replacements (a 40% saving!).
- ▶ During the **grinding phase**, the use of this tool allows to **redouble the life** of the subsequently tools (Smoothing phase).
- ▶ **Having no thermic stress from welding**, it guarantees the long life of the abrasive compound (Sectors).
